FROM INCEPTION TO SUCCESS

Smart Contract Audit

FOR

MiniDoge

DATED : 06 April 24'

AUDIT SUMMARY

Project name – MiniDoge

Date: 06 April 2024

Scope of Audit- Audit Ace was consulted to conduct the smart contract audit of the solidity source codes.

Audit Status: Passed

Issues Found

Status	Critical	High	Medium	Low	Suggestion
Open	0	0	0	2	1
Acknowledged	0	0	0	0	0
Resolved	0	0	0	0	0

USED TOOLS

Tools:

1- Manual Review:
A line by line code review has been performed by audit ace team.

2- BSC Test Network: All tests were conducted on the BSC Test network, and each test has a corresponding transaction attached to it. These tests can be found in the "Functional Tests" section of the report.

3- Slither :
The code has undergone static analysis using Slither.

Testnet version:
The tests were performed using the contract deployed on the BSC Testnet, which can be found at the following address:
https://testnet.bscscan.com/address/0x81431f480456ed34f3d3fe3ce59b033d6dc41598#code

Token Information

Token Address: 0xaE05711c27e82C18bBf4cf905BE393D8161eb67A

Name: MiniDoge

Symbol: MiniDoge

Decimals: 9

Network: Base Chain

Token Type: ERC-20

Owner: 0x7Ed14577D32e0F7383fd62c2598295A57900d451

Deployer: 0x7Ed14577D32e0F7383fd62c2598295A57900d451

Token Supply: 1000000000000000

Checksum: 67c39213a6527b25b3eb8deabf9424e7

Testnet version:
The tests were performed using the contract deployed on the Binance smart chain Testnet, which can be found at the following address: https://testnet.bscscan.com/address/0x81431f480456ed34f3d3fe3ce59b033d6dc41598#code

AUDIT METHODOLOGY

The auditing process will follow a routine as special considerations by Auditace:

- Review of the specifications, sources, and instructions provided to Auditace to make sure the contract logic meets the intentions of the client without exposing the user's funds to risk.
- Manual review of the entire codebase by our experts, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
- Specification comparison is the process of checking whether the code does what the specifications, sources, and instructions provided to Auditace describe.
- Test coverage analysis determines whether the test cases are covering the code and how much code isexercised when we run the test cases.
- Symbolic execution is analysing a program to determine what inputs cause each part of a program to execute.
- Reviewing the codebase to improve maintainability, security, and control based on the established industry and academic practices.

VULNERABILITY CHECKLIST

- [x] Return values of low-level calls
- [x] Private modifier
- [x] Multiple Sends
- [x] Using Suicide
- [x] Gas Limitand Loops
- [x] Address hardcoded
- [x] Exception Disorder
- [x] Using inline assembly
- [x] Divide before multiply
- [x] Missing Zero Address Validation
- [x] Compiler version not fixed
- [x] **Gasless Send**
- [x] Using block.timestamp
- [x] Re-entrancy
- [x] Tautology or contradiction
- [x] Timestamp Dependence
- [x] Revert/require functions
- [x] Use of tx.origin
- [x] Integer overflow/underflow
- [x] Dangerous strict equalities
- [x] Using SHA3
- [x] Using throw

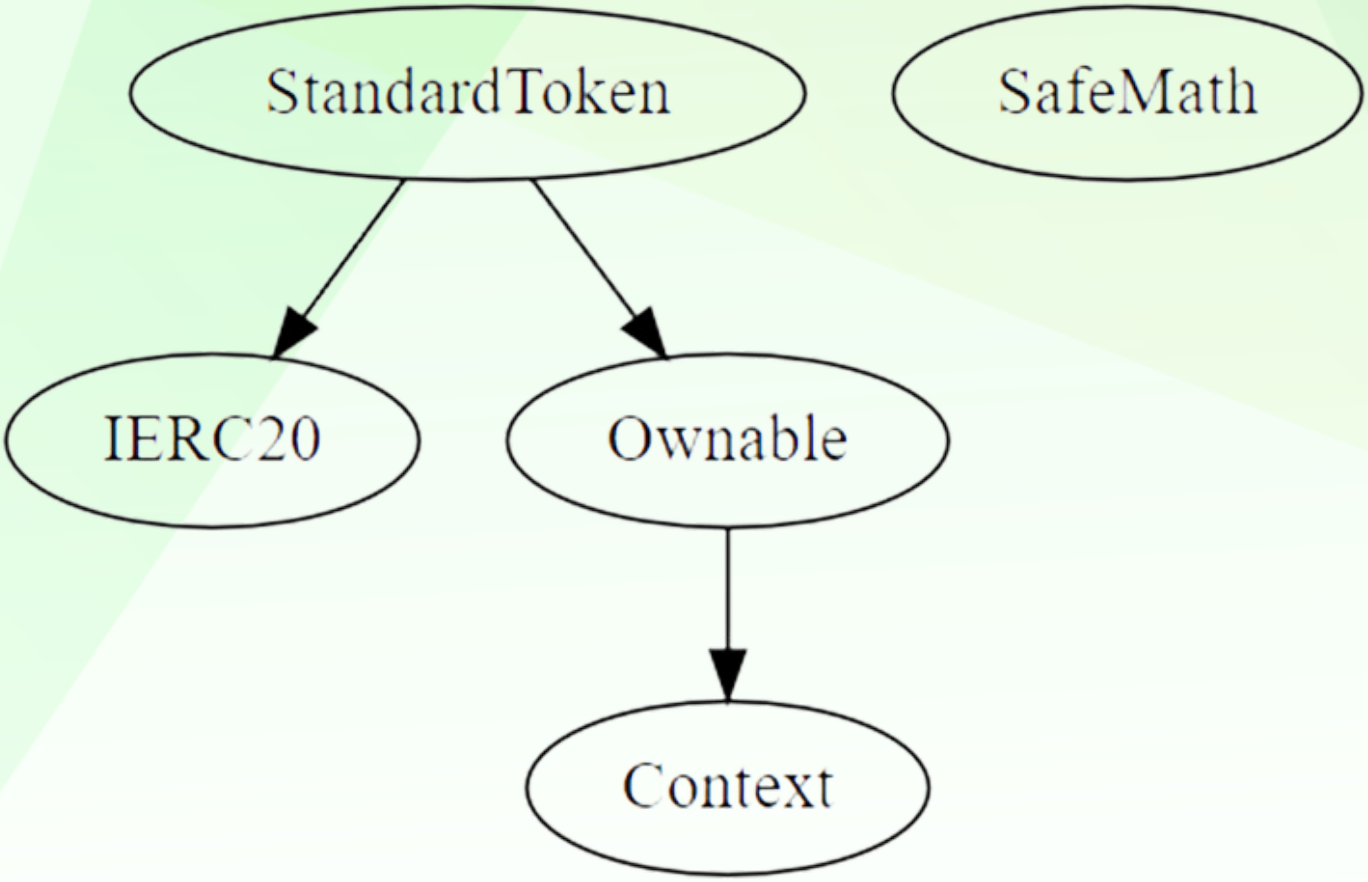
CLASSIFICATION OF RISK

Severity	Description
Critical	These vulnerabilities could be exploited easily and can lead to asset loss, data loss, asset, or data manipulation. They should be fixed right away.
High-Risk	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.
Medium-Risk	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.
Low-Risk	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.
Gas Optimization /Suggestion	A vulnerability that has an informational character but is not affecting any of the code.

Findings

Severity	Found
Critical	0
High-Risk	0
Medium-Risk	0
Low-Risk	2
Gas Optimization / Suggestions	1

INHERITANCE TREE



POINTS TO NOTE

- The owner can renounce ownership.
- The owner can transfer ownership.

STATIC ANALYSIS

```
INFO:Detectors:
StandardToken.allowance(address,address).owner (StandardToken.sol#522) shadows:
        - Ownable.owner() (StandardToken.sol#150-152) (function)
StandardToken._approve(address,address,uint256).owner (StandardToken.sol#680) shadows:
        - Ownable.owner() (StandardToken.sol#150-152) (function)
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#local-variable-shadowing
INFO:Detectors:
Context._msgData() (StandardToken.sol#110-112) is never used and should be removed
SafeMath.div(uint256,uint256) (StandardToken.sol#324-326) is never used and should be removed
SafeMath.div(uint256,uint256,string) (StandardToken.sol#380-389) is never used and should be removed
SafeMath.mod(uint256,uint256) (StandardToken.sol#340-342) is never used and should be removed
SafeMath.mod(uint256,uint256,string) (StandardToken.sol#406-415) is never used and should be removed
SafeMath.mul(uint256,uint256) (StandardToken.sol#310-312) is never used and should be removed
SafeMath.sub(uint256,uint256) (StandardToken.sol#296-298) is never used and should be removed
SafeMath.tryAdd(uint256,uint256) (StandardToken.sol#211-217) is never used and should be removed
SafeMath.tryDiv(uint256,uint256) (StandardToken.sol#253-258) is never used and should be removed
SafeMath.tryMod(uint256,uint256) (StandardToken.sol#265-270) is never used and should be removed
SafeMath.tryMul(uint256,uint256) (StandardToken.sol#236-246) is never used and should be removed
SafeMath.trySub(uint256,uint256) (StandardToken.sol#224-229) is never used and should be removed
StandardToken._setupDecimals(uint8) (StandardToken.sol#698-700) is never used and should be removed
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#dead-code
INFO:Detectors:
Pragma version=0.8.19 (StandardToken.sol#420) necessitates a version too recent to be trusted. Consider deploying with 0.8.18.
solc-0.8.19 is not recommended for deployment
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#incorrect-versions-of-solidity
INFO:Detectors:
StandardToken.constructor() (StandardToken.sol#438-447) uses literals with too many digits:
        - _totalSupply = 1000000000000000 * 10 ** _decimals (StandardToken.sol#444)
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#too-many-digits
INFO:Detectors:
StandardToken._totalSupply (StandardToken.sol#436) should be immutable
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#state-variables-that-could-be-declared-immutable
INFO:Slither:StandardToken.sol analyzed (5 contracts with 93 detectors), 19 result(s) found
```

Result => A static analysis of contract's source code has been performed using slither,

No major issues were found in the output

FUNCTIONAL TESTING

1- Approve (passed):

https://testnet.bscscan.com/tx/0x5f38d6acf2a6debec31b60d3761054e10886a6150afec3702c61e7da984c2e18

2- Increase Allowance (passed):

https://testnet.bscscan.com/tx/0x126ca400594d20208c05d1419ca4924c8ed22940dd0b9206a831e833a78a92dc

3- Decrease Allowance (passed):

https://testnet.bscscan.com/tx/0x10939beb253d2826f929ec0f7c34a7a5f880bf579d2cc2b71b3efedad00a14c8

4- Transfer (passed):

https://testnet.bscscan.com/tx/0x34718e89510c8e20b3d23be15e2cc301dc998e9376dc54a26681d66815469b37

MANUAL TESTING

Centralization – Remove the safe math library.

Severity: Low

Status: Open

Line Number: 205-416

Overview:

The Safe Math library is no longer needed for Solidity version 0.8 and above. This is because Solidity 0.8 includes checked arithmetic operations by default. All Safe Math's methods are now inherited into Solidity programming.

MANUAL TESTING

Centralization – Local Variable Shadowing

Severity: Low

Status: Open

Function: _approve and allowance

Overview:

```
function allowance(address owner, address spender)
    public
    view
    virtual
    override
    returns (uint256)
  {
    return _allowances[owner][spender];
  }
function _approve(
    address owner,
    address spender,
    uint256 amount
  ) internal virtual {
    require(owner != address(0), "ERC20: approve from the zero
address");
    require(spender != address(0), "ERC20: approve to the zero
address");

    _allowances[owner][spender] = amount;
    emit Approval(owner, spender, amount);
  }
```

Suggestion:

Rename the local variable that shadows another component.

MANUAL TESTING

Optimization

Severity: Optimization

Subject: Remove unused code.

Status: Open

Overview:

Unused variables are allowed in Solidity, and they do. not pose a direct security issue. It is the best practice. though to avoid them

```
function _msgData() internal view virtual returns (bytes calldata) {
    return msg.data;
  }
}
function _setupDecimals(uint8 decimals_) internal virtual {
    _decimals = decimals_;
  }
```

ABOUT AUDITACE

We specializes in providing thorough and reliable audits for Web3 projects. With a team of experienced professionals, we use cutting-edge technology and rigorous methodologies to evaluate the security and integrity of blockchain systems. We are committed to helping our clients ensure the safety and transparency of their digital assets and transactions.
